### HOW TO READ

Records use W, L, P (push), V (void) and pending. Win rate is W/(W+L).

Every grade settles the exact immutable issued proposition. No engine is rerun and no later FanDuel line replaces the issued line.

Ratings (WEAK / MODERATE / STRONG / ELITE) are labels on the selected win probability, assigned at issuance by the rating definition sealed with each position (tier_policy_sha256) and retained exactly as issued, except a separately recorded and verified pre-kickoff public revision. Original ratings and revision evidence remain in the position export; no grader run computes new ratings. The definition changed during the season, so a label has one meaning only within one definition and engine. Target-slate positions were rated under SLATE-QUARTILES-V3. A rating is relative confidence within its definition and engine, not a win probability; the model probability is shown separately (APEX P). Ratings are evaluated, not assumed, in section E, grouped by definition.

NCAA full-game spread and total settlement includes overtime unless the applicable issued-market rules state otherwise. A whole-number line landing on the result is a push.

KNOWN EVIDENCE LIMITATION · FANDUEL_SETTLEMENT_RULE_SOURCE=UNRECORDED_JURISDICTION_DETAIL: the jurisdiction-specific FanDuel settlement rule text in force for each issued market is not recorded in the evidence; every grade settles the issued line and price against the official final score.

# A. YESTERDAY — TARGET-SLATE POSITION LEDGER (2026-10-17)

# C. PROBABILITY QUALITY AGAINST FANDUEL — PAIRED, IDENTICAL OBSERVATIONS

Each row pairs the APEX issued probability with the same-side FanDuel no-vig probability from the quote captured at issuance, on the same game, market and settled W/L outcome. Lower is better. Δ = APEX − FanDuel (negative favours APEX).

| ENGINE | PAIRED N | APEX BRIER | FD BRIER | Δ BRIER | APEX LOGLOSS | FD LOGLOSS | Δ LOGLOSS | APEX < FD (BRIER) |
|---|---|---|---|---|---|---|---|---|
| ATS | 482 | 0.250034 | 0.250734 | -0.000700 | 0.693213 | 0.694615 | -0.001403 | 249 of 482 |
| TOTALS | 482 | 0.251231 | 0.248968 | +0.002263 | 0.695609 | 0.691083 | +0.004526 | 236 of 482 |

Record eligible W/L rows without a FanDuel comparator in their immutable grade (not in the paired table, listed by slate and sealed engine): ATS 8 [2026-08-29 (8, GLOBAL_EMPIRICAL_V1)]; TOTALS 8 [2026-08-29 (8, RIDGE_GAUSSIAN_A100_V1)]. FanDuel no-vig method as registered in each grade object: TWO_WAY_MULTIPLICATIVE_NORMALIZATION.

### TOTALS — RETAINED FULL-DISTRIBUTION SCORES (APEX ONLY)

| SCORE | N | VALUE | CONVENTION |
|---|---|---|---|
| PMF LOGSCORE (total PMF) | 487 | 4.072328 | retained integer-support PMF, read from the immutable grade |
| RPS | 487 | 0.033935 | retained integer-support PMF, read from the immutable grade |
| ISSUED PUSH PROBABILITY (mean) | 490 | 0.000000 | explicit in each sealed distribution |

No FanDuel full-distribution comparator exists: a single total line and two prices do not determine a distribution over totals, so none is constructed. The paired FanDuel comparison above is on the binary selected-side probability only.

# D. CALIBRATION (RECORD ELIGIBLE W/L ROWS)

Calibration (is p the realized frequency?) and discrimination (does p separate outcomes?) are reported separately. Brier = miscalibration − discrimination + uncertainty (Murphy decomposition on the PAV fit).

DIAGNOSTIC BINS ONLY · fixed reporting edges 0.50 / 0.51 / 0.52 / 0.54 / 0.58 on the issued probability, the same every day so bins compare across days. They are not rating cut points: each position's rating comes from its own sealed definition (HOW TO READ and section E). Small bins are shown with their N; nothing is pooled across engines.

# E. RATINGS — AS ISSUED, GROUPED BY RATING DEFINITION

Historical labels are immutable and are not recalculated. Verified pre-kickoff public revisions are identified in the position export with their originals retained. Each band is reported within one engine and one rating definition (the tier_policy_sha256 sealed at issuance); CUT is that band's lower cut point on the selected win probability. N is shown for every band; tiny bands are not averaged away.

## F. INTEGRITY SUMMARY

Counts are computed from the displayed rows. Line, price, probability and market-record checks compare each sealed position with the proposition its immutable grade settled.

Never-reset bounded confidence sequence and mixture e-process over every grade the canonical prospective court retains: 944 sealed predictions, 944 graded, 1888 sequence rows, activation epoch 2026-09-01T03:30:00Z. The court admits only positions sealed on or after its activation epoch, so its N per engine is smaller than the paired N in section C, which pairs every record-eligible grade that carries a FanDuel comparator. Framework: BOUNDED_HOEFFDING_STITCHED_CONFIDENCE_SEQUENCE_AND_PREDICTABLE_MIXTURE_E_PROCESS.
