RECONCILIATION · physical 772 – excluded post-kickoff 32 = prospective 740 (ATS 386 – 16 = 370; TOTALS 386 – 16 = 370). Excluded by slate: 2026-09-25 (2), 2026-09-26 (30).

HOW TO READ

Records use W, L, P (push), V (void) and pending. Win rate is $W/(W+L)$. Flat units are per position at the issued price.

Every grade settles the exact immutable issued proposition. No engine is rerun and no later FanDuel line replaces the issued line.

Ratings (WEAK / MODERATE / STRONG / ELITE) are ISSUED PROBABILITY BANDS on the selected win probability (cut points 0.52 / 0.54 / 0.58). They are retained exactly as issued and are evaluated, not assumed, in section E.

NCAA full-game spread and total settlement includes overtime unless the applicable issued-market rules state otherwise. A whole-number line landing on the result is a push.

KNOWN EVIDENCE LIMITATION · FANDUEL_SETTLEMENT_RULE_SOURCE=UNRECORDED_JURISDICTION_DETAIL: the jurisdiction-specific FanDuel settlement rule text in force for each issued market is not recorded in the evidence; every grade settles the issued line and price against the official final score.

A. YESTERDAY — TARGET-SLATE POSITION LEDGER (2026-10-03)

108 physical positions on 54 games; 0 excluded post-kickoff. FD P = same-side FanDuel no-vig probability from the issuance-time quote (two-way multiplicative normalization); Δ = APEX – FD.

C. PROBABILITY QUALITY AGAINST FANDUEL — PAIRED, IDENTICAL OBSERVATIONS

Each row pairs the APEX issued probability with the same-side FanDuel no-vig probability from the quote captured at issuance, on the same game, market and settled W/L outcome. Lower is better. Δ = APEX – FanDuel (negative favours APEX).

ENGINE	PAIRED N	APEX BRIER	FD BRIER	Δ BRIER	APEX LOGLOSS	FD LOGLOSS	Δ LOGLOSS	APEX < FD (BRIER)
ATS	362	0.249827	0.250759	-0.000932	0.692799	0.694667	-0.001868	189 of 362

Prospective W/L rows without a FanDuel comparator in their immutable grade (not in the paired table, listed by slate and sealed engine): ATS 8 [2026-08-29 (8, GLOBAL_EMPIRICAL_V1)]; TOTALS 8 [2026-08-29 (8, RIDGE_GAUSSIAN_A100_V1)]. FanDuel no-vig method as registered in each grade object: TWO_WAY_MULTIPLICATIVE_NORMALIZATION.

TOTALS — RETAINED FULL-DISTRIBUTION SCORES (APEX ONLY)

SCORE	N	VALUE	CONVENTION
PMF LOGSCORE (total PMF)	370	4.058377	retained integer-support PMF, read from the immutable grade
RPS	370	0.033444	retained integer-support PMF, read from the immutable grade
ISSUED PUSH PROBABILITY (mean)	370	0.000000	explicit in each sealed distribution

No FanDuel full-distribution comparator exists: a single total line and two prices do not determine a distribution over totals, so none is constructed. The paired FanDuel comparison above is on the binary selected-side probability only.

D. CALIBRATION (PROSPECTIVE W/L ROWS)

Calibration (is p the realized frequency?) and discrimination (does p separate outcomes?) are reported separately. Brier = miscalibration – discrimination + uncertainty (Murphy decomposition on the PAV fit).

Never-reset bounded confidence sequence and mixture e-process over every grade the canonical prospective court retains: 710 sealed predictions, 710 graded, 1420 sequence rows, activation epoch 2026-09-01T03:30:00Z. The court admits only positions sealed on or after its activation epoch, so its N per engine is smaller than the paired N in section C, which pairs every prospective-eligible grade that carries a FanDuel comparator. Framework: BOUNDED_HOEFFDING_STITCHED_CONFIDENCE_SEQUENCE_AND_PREDICTABLE_MIXTURE_E_PROCESS.
